PRODUCTION SYSTEMS AND SERVICES STABILITY OWNER

Senior/Lead Site Reliability Engineer | Cloud Infrastructure & Observability | Azure & Private Cloud

Senior SRE & Operations Engineer with 20+ years delivering high-availability platforms for Amadeus IT Group, one of the world's largest travel reservation and distribution networks, consistently achieving 98–99% availability across 460+ mission-critical applications by reducing operational toil through automation, observability tooling, and blameless incident management. Led alerts-as-code initiatives at Amadeus using Prometheus, Thanos, and Grafana to standardize SLO-based monitoring at scale. Expertise also includes infrastructure-as-code practices developed through hands-on portfolio work in AWS and Terraform. Proven ability to own complex services end-to-end while driving efficiency, scalability, and reliability.

PROJECTS

- ***Spearheaded a JIRA EPIC to enhance, consolidate, and standardize Cloud alerts:***
 - Presented to the organization's Development Department a model for standardized alerts (templates) to be used by the entire support organization and helped maintain these to adapt them to all levels required.
 - Initiated coordination between development and operations teams to migrate alert events from internal "alerting system" into ServiceNow.
 - Pioneered, after "as-code" templates were created, to extend and amend standard alerts as needed (written in GO) using queries in PromQL via Thanos to trigger those alerts and building on-the-fly Grafana dashboards.
- ***Elemental on the support of customer application and data migrations in Amadeus and all prior roles:***
 - 2018-2026: From physical and virtual Linux and windows systems to Cloud platforms 2018. Migrations to Openshift server 3.x and 4.x on private platforms followed by migration to public cloud: Azure.
 - 2005-2016: Migrations from Mainframes (IBMs TPF) to Unix/Linux Physical and VMWare + Veritas Cluster Services (VCS).

EXPERIENCE

AMADEUS Global Operations Americas Inc.

Sr. Service Reliability Engineer (SRE) - Cloud Technologies

2019 – 2026

Fully Remote Mar 2020 – May 2023 / Hybrid Jun 2023 - Mar 2026

- Led enterprise-wide JIRA Epic that standardized template-based monitoring alerts (written in Go with PromQL/Thanos), integral part on migration of events into ServiceNow, reduced alert noise/duplication by eliminating redundant alerts, and delivered on-the-fly Grafana dashboards, now adopted across the entire organization for 460+ global travel applications.
- Directed end-to-end reliability engineering for 460+ mission-critical production applications (reservations, ticketing, inventory, loyalty) in a 24/7 high-availability SaaS environment, consistently achieving and sustaining 98–99% uptime while meeting strict SLAs and SLOs for global B2B customers (Airlines, Hotels, Cruise Lines, Car Rental, etc.).
- Spearheaded proactive observability and capacity planning initiatives, implementing autoscaling, advanced monitoring strategies, and alerting solutions that prevented outages during extreme seasonal load spikes and major travel events.
- Served as senior leader on the Incident & Problem Management team, driving rapid recovery of critical services, minimizing customer impact, and championing blameless postmortems and continuous process improvements to the Change Management framework over a decade.
- Pioneered changes for transition from proprietary event-management tooling (Winapproach) to standard industry ServiceNow for all platform alerts, significantly improving operational efficiency and reducing false positives.
- Built and fine-tuned advanced SRE tooling using Prometheus, Thanos, Grafana, PromQL, and GitHub Actions; created custom operational procedures and integrated alerting with Microsoft Teams and ServiceNow during the full migration to a Prometheus-based architecture.
- Applied SRE and observability principles across Azure/OpenShift environments; rapidly adaptable to GCP/Terraform based on proven cloud migration leadership

- Used AI prompting and Chatbots with specific proprietary LLM model(s) (Copilot, Claude, GPT-4, etc.) as well as Github Copilot to code snippets and discover/correct Public/Private Cloud platform related issues raised by automation (Internal ticketing system, SNOW, Thanos alerts) while referencing Retrieval-Augmented Generation (RAG) corporate content (OPROCs, Confluence references pages, etc).
- Led cloud technology adoption and large-scale migrations from legacy physical/virtual Linux systems to private OpenShift (v3.x/v4.x) and public Azure platforms (2020–2021), while maintaining zero business disruption.
- Trained and onboarded 25+ engineers as the official instructor for the Amadeus Cloud Services (ACS) curriculum, delivering core courses on “ACS Induction” and “ACS Incidents and Recovery” within an Agile SAFe 5.x framework.

Amadeus North Amercia, Sr. Systems Engineer & Lead Systems Engineer (UNIX/Linux)

2004 – 2008 / 2008 - 2019

- **Led a global 24/7 team of 9 SREs**, driving mission-critical platform availability to an average of 99% for systems supporting the global travel industry, while directing all incident, change, and problem management using ITIL best practices.
- **Owned operational stability and risk management for a multi-million Euro environment** spanning over 5,500 production and test systems (HP-UX, Linux, multiple architectures), overseeing high-availability cluster operations (Veritas, MC/ServiceGuard) and all major OS/database upgrades.
- **Championed automation and reliability engineering**, developing custom scripts and tools (Perl, PHP, HTML) to enhance monitoring, accelerate fault recovery, and eliminate toil, directly supporting the team’s ability to meet stringent availability targets.
- **Managed cross-functional technical execution**, including Oracle version migrations, IBM MQ incident resolution, and oversight of administrative environments (Dev/Pre-Prod/Prod), ensuring coordinated, low-risk change implementation across the entire technology stack.

EARLY CAREER HIGHLIGHTS

- UNIX System Administrator, Rollins, Inc., Atlanta, GA Led high-impact production migration of national call-center environment from legacy HP-UX/Oracle to new platform without external contractors, delivering immediate stability improvements and \$10,000 in cost savings.
- Senior Personnel System & Database Administrator, U.S. Army, Fort Benning, GA Directed 5-person team supporting 19 servers; designed and streamlined network infrastructure that reduced operational effort by 14,000 man-hours per year and generated \$200,000 in resource-management savings. Enhanced division-level database prototype by 40%, driving \$28 million in annual Army-wide cost savings while training 200+ end users.

EDUCATION

University of Florida (2013): Masters of Executive Management in Business Administration (EMBA)

Nova Southeastern University, FL (2007): Masters of Computer Information Systems (MIS)

LICENSES & CERTIFICATIONS

- *MS Azure Fundamentals FinOps Foundation*
- *FinOps Foundation*
- **Pursuing:** HashiCorp Terraform Associate, AWS Certified SysOps Administrator
- *MS Azure Data Fundamentals*
- *SAFe 5 Practitioner*

SKILLS

- **Cloud Platforms:** Azure & RH Openshift : Kubernetes (v1.27.x)/ OpenShift (v4.1x)
- **Databases:** Supported: Oracle, MariaDB,MySQL. Usage of SQL, MySQL, promQL
- **Tools:** Git/Github, JIRA, VMware ESXi, Docker, Kubernetes, BIRD, Deployment Manager, Jenkins pipelines
- **Frameworks:** IT ServicesManagement (ITSM), Scaled Agile Framework (SaFE)
- **Observability and Monitoring:** Thanos, Grafana, Splunk, Prometheus
- **Automation & Alerting:** ServiceNow (Service Mgt), Resolve (automation), Jira (Agile)
- **Operating Systems:** Linux RHEL,SuSe Linux, CentOS, Ubuntu, AIX, Solaris, Mac OS, HP/UX Windows
- **Languages:** Unix / Linux Shells Scripts, sed, Awk,PHP, Perl, GO
- **Communications and Documentation:** *Atlasian:* Confluence & JIRA / MS: SharePoint, Yammer / wiki, Jabber
